issue fee.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. The amendment only corrects typographical errors in the amended claimset. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the

The application has been amended as follows:

In claim 15, line 3, "an" has been deleted.

In claim 18, line 16, "drain" has been replaced by -region--.

- 2. Claims 11-26 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance is that the prior art does not reasonably suggest extending the control region/p-type gate region along the bottom and sidewalls of a trench, such that the control region/gate region contacts the second/source region in the structure defined in claims 11 and 18. Generally, the prior art having a similar structure suggests leaving a gap between a control region and a doped source region (see, for example, U.S. Patent No. 5,747,831 to Loose et al. or 5,396,085 to Baliga), in order to avoid a degradation of the blocking voltage. The only occurrences of a control region in contact with a source region in a similar structure

Application/Control Number: 10/681,126

Art Unit: 2813

(see U.S. Patent No. 6,617,653 to Yokogawa et al.) use an oppositely doped (p) region separating the (n) substrate/drift region and the (n) source region, such that the source/second regions are not formed on a plane of the drift/substrate regions. In the examiner's opinion, it is not reasonable to combine these teachings, because the added p-region in Yokogawa changes the operation of the device, and thus the desired parameters of the control region, by having the control region largely interface with the p-layer rather than the n-substrate. Since the device as claimed has the advantage over the prior art of allowing for a larger effective channel length, and since the prior art fails to reasonably suggest the feature of contacting the control/gate region with the second/source region in a device with the claimed geometry, it is the examiner's opinion that such a feature would not have been obvious to a person skilled in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer M. Dolan whose telephone number is (571) 272-1690. The examiner can normally be reached on Monday-Friday 8:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl W. Whitehead, Jr. can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
